Product Safety and Quality

Product Safety and Quality Policies and Philosophy

Product evaluations and automaker brand value are entirely dependent on customer perception of quality. In the automotive industry, rapid technical innovations are seeing customers demand ever-higher levels of quality in the products they purchase. A company can strengthen its brand by consistently providing the value customers expect, but failing to meet expectations even once makes it harder to maintain a platform for providing new value to those customers.

As mobility needs rise worldwide, driven by increased urbanization and structural changes in the global economy, Nissan is fulfilling its mission of offering people everywhere the rich benefits of mobility. At the same time, we believe that automakers have an important responsibility to always offer customers the kind of quality they expect.

Nissan aims to earn its customers' trust by addressing quality as a companywide issue. This means providing top-level quality to customers at every stage, from the planning of new vehicles through development, manufacturing, logistics, and sales to aftersales service.

Quality Policies and Philosophy

Quality has many aspects, and we seek to provide high quality at all stages of the customer experience: how it feels to use the product itself, the way customers are treated by sales staff in showrooms, the response if problems arise with the product. To achieve this, we pursue effective companywide cooperation at the cross-functional and cross-regional levels.

Based on a customer-centric ethos, Nissan places the highest priority on customer feedback and aims to enhance the quality of products and services that provide customers with a deep sense of satisfaction to ensure they choose Nissan vehicle over the long term through efforts focused on product, sales and service quality.

Vehicle product quality is essential for safe and comfortable long-term use. We aim to provide a high level of quality that meets customer expectations over the entire life cycle of the product. This includes the perceived quality when a customer opens the vehicle's door in the showroom, sits in the seat, and takes a test drive; the initial quality when the vehicle is delivered to the customer; and the durability that allows the vehicle to provide many years of use.

We also conduct initiatives to increase customer satisfaction (CS) regarding sales and service quality. Our aim is to exceed expectations at every customer contact point, including dealership visit, purchase, maintenance, inspection, and repurchase.

We listen to customers and incorporate their feedback in every process throughout the company in our pursuit of CS.

Product Safety and Quality Management

Ensuring the safety of customers who purchase Nissan cars and consistently providing the quality they expect are both important issues. To achieve sustainable growth as a company that is trusted by its customers, Nissan has created organization to promote quality improvement globally, and all Nissan employees are engaging in activities as one. Clearly defined by an ISO9001-compliant quality management system, the persons in charge are assigned and the processes applied to a wide range of quality improvement activities on a global basis.

As of January 2023, 23 out of 24 vehicle production bases*, including consolidated and non-consolidated sites, have acquired ISO9001 certification. One base is proceeding with the process to obtain certification by the end of March.

* Excluding non-consolidated OEM plants

Management Systems for Product Safety and Quality

To achieve top-level quality, we have assigned a number of Senior Vice Presidents, headed by the Chief Quality Officer (CQO), to focus exclusively on quality issues. A CQO meeting, chaired by the CQO, is held every month and attended by executives representing each division and region. These meetings work to promote the swift solution and improvement of issues related not just to product quality but also to sales and service quality experiences before and after purchase.

Additionally, in order to fully implement compliance, we have established a three-layer monitoring and audit system and are working to strengthen our audit activities. The first layer consists of each division implementing monitoring activities to ensure strict observance of laws and standards.

In the second layer, the Conformity Audit Office conducts audits of those efforts to observe laws and standards. And in the third layer, the Internal Audit Office conducts risk-based audits in accordance with annual plans.

Product Safety and Quality Achievements

Reflecting Customer Feedback in Activities to Enhance Quality

Quality reflects how successfully Nissan interacts with its customers. To provide the value that customers expect and respond rapidly if they are not satisfied, we listen to all feedback and put what we learn to use in measures to improve quality at every stage, from product design and development to aftersales service.

Responding Rapidly to Customer Feedback and Timely Sharing of Information

We receive and respond to customer comments and questions worldwide through a range of contact points, including dealers, call centers, and surveys. Our customer call center in Japan, for example, receives around 200,000 comments and questions from customers annually. To respond rapidly to customer feedback, we are utilizing digitized catalogs and technical materials from the past 50 years and a frequently asked question (FAQ) search system. Opinions and comments received by our customer call center in Japan are anonymized and shared companywide on the intranet, where employees can access and view them at any time. Information is also promptly sent by email to executives and senior managers.

Contents		Corporate direction		Environmental		Social		Governance		Data / Index	
Social Policies and Philosophy	Human Rights	Traffic Safety	Diversity and Inclusion	Product Safety and Quality	Supply Chain Management	Human Resource Development	Labor Practices	Employees' Health and Safety	Community Engagement		

Employees who buy Nissan vehicles are also customers and important stakeholders. Having installed the “Quality Listening Box” on our intranet, we are utilizing employee feedback in promoting activities designed to raise the quality of products and services.

To achieve faster and more accurate customer responses, the FAQ search system underwent complete renovation in fiscal 2021, by which its displays and searchability were greatly enhanced. Some of the FAQs have been made publicly available for customers, and we are devising ways to save customers the trouble of making inquiries by solving them by themselves.

Incorporating Customer Feedback into Products and Services

We have implemented a system for reflecting customer feedback in our products and services. Reliable information sharing ensures that this feedback is incorporated in the work of all functions, including product planning, R&D, manufacturing, and sales. Product quality is about more than just a lack of mechanical faults—it includes any factors that could lead customers to feel dissatisfied.

We see these factors as issues requiring action and strive to improve quality across all areas. The value that customers expect from products varies according to their region, age, and personal tastes and can also be affected by market factors, such as product diffusion levels or even climate. Although we have basic specifications for global design, we fine-tune these to meet regional needs. The Chief Quality Engineer (CQE) performs this role, participating in the vehicle manufacturing process from the product planning stage in order to reduce customer dissatisfaction and defects. We glean customer perspectives from market information and employee monitors and prioritize our response to these from the planning and development stages for both products and services.

Adopting a Customer Perspective

We believe all employees must have a customer-centric perspective and are implementing a variety of activities, including companywide training to foster this mindset and efforts to provide opportunities to experience customer feedback on a daily basis.

Since 2003, we have also held Nissan Quality Forums for executives, employees, and suppliers. These annual forums use information displays, video presentations and actual vehicles, and parts to showcase our latest quality results, customer feedback, and activities aimed at meeting targets. The forums are organized cross-functionally by all divisions from R&D to service. In recent years, experiential events that lead to actions being taken have been organized to raise all employees' focus on customers and the importance of quality and to help them think and act from the customer's perspective. They are held globally in Japan, North America, Europe, China, Southeast Asia, and other regions.

Improving Product Quality

Product quality is a basic feature in allowing customers to use a product safely and comfortably over the long term. For Nissan, a leading automaker with a strong history of *monozukuri*, Japan's tradition of careful craftsmanship, product quality is the foundation for our sustainability as a company. We consider quality from the customer's perspective at all times and respond quickly if a defect occurs, striving to prevent recurrence so as not to inconvenience the customer. We ascertain customer dissatisfaction and address it through all possible means, improving quality to increase satisfaction.

Approaches in Development and at Manufacturing Plants

Improving Perceived Quality and Developing Vehicles with Valued Designs

Perceived quality is the quality that customers feel when seeing, touching, and operating a vehicle. For example, when customers come to the showroom, they open vehicle doors, sit in seats, and check things like the texture of interior fittings.

The perception of quality is a particularly subjective matter, and applying objective criteria requires thorough studies. We conduct consumer research around the world targeting customers who have purchased or are considering purchasing a Nissan car in order to understand their perceptions better and incorporate those perceptions in new vehicles. Our perceived quality specialists communicate the voice of customers around the world and support us to develop attractive stylish vehicles that are valued by our customers.

Producing Products of Consistent Quality Worldwide

At Nissan, we will continue to produce products of a quality that exceeds our customers' expectations. At the Tochigi Plant, we launched the Nissan Intelligent Factory to meet environmental considerations, such as carbon neutrality and the effective use of resources, and to meet the needs for electrified, intelligent cars, and are realizing *monozukuri* that places less of a burden on our employees. The Intelligent Factory will be deployed horizontally to global plants in the years to come.

Including these activities, Nissan will deploy quality initiatives in four areas, make comprehensive efforts from the development stage of new vehicle offerings to the pipeline that delivers vehicles to customers, and stably supply high-quality products.

Four Areas in Nissan Production/Supply Chain Management (SCM)

New Model Quality Initiatives	At the digital stage of a new model, we will simulate a virtual factory, utilize simulation and virtual reality, and collaborate with design departments to create vehicle designs in digital form. The Global Production Engineering Center is also making efforts to realize high-quality vehicle production from the outset at all plants worldwide through the verification of the structural construction method of prototype vehicles.
Power Train Quality Initiatives	To complete quality manufacturing in each process, we set Quality Gates for each process, establish non-defective product conditions, and carry out activities designed to deliver non-defective products to the next process. We will also reflect the opinions of our customers in product and process designs, work to further improve the quality of new products, and contribute to the realization of stable quality.
Production Vehicle Quality Initiatives	Having developed highly reliable forming and joining techniques and tools that can reliably comply with quality requirements, we are improving the Built in Quality of each process. In addition, to leverage the Global Training Center and to devise ways to stabilize the quality brought about by manual labor, we are promoting the global development of advanced skills through the Master Trainer training program, and aiming to realize stable quality at all global plants.
Logistics Quality Initiatives	In the transport process that delivers completed vehicles to customers, we utilize the same global evaluation index to rate the quality of the accessory installation work and logistics transport operations. Through benchmarks at each site, we are promoting further improvements, maintaining factory shipping quality, and promoting the provision of high-quality vehicles to our customers.

Implementing Quality Tests Envisioning a Myriad of Situations

Each of our production cars and development models is evaluated using a system called AVES* to monitor quality on a daily basis. Feedback from customers is incorporated in standardized evaluation criteria, which are used to train quality assessment specialists. Only these company-certified experts, known as "AVES Masters," can perform our strict daily assessments. The assessment process evaluates the vehicle's interior and exterior and tests it while it is in operation, focusing on whether it meets quality standards defined in terms of customer requirements. During the running tests, carried out on actual roads, assessors check the vehicle in areas including unexpected noise, vibration, stability of handling, and the functionality of its various advanced systems. Final responsibility for overall quality is the responsibility of the COE, who envisages different use scenarios for Nissan vehicles and carries out stringent quality checks accordingly.

* AVES stands for "Alliance Vehicle Evaluation Standard." AVES is a quality evaluation system used across the Renault-Nissan-Mitsubishi Alliance, in which specially trained experts assess vehicles using more than 300 quality assessment criteria established from the customer's perspective.

Activities to Improve Market Quality

Swiftly Improving Quality in Local Markets

We are strengthening direct communication with sales companies and customers to promptly identify and respond to customer dissatisfaction and defects. Our Total Customer Satisfaction Function Division (TCSX) addresses customer dissatisfaction and quality issues based on information from sales companies and the customer call center. It shares information with the R&D and manufacturing divisions to investigate the causes and come up with countermeasures. These countermeasures are incorporated in production models on the market. In this way, we seek permanent solutions to prevent outflow of quality issues.

The global expansion of our corporate activities has increased our potential exposure to customer dissatisfaction and quality issues in more regions around the world. In response, we have established Field Quality Centers (FQCs) with the goal of promptly gaining an understanding of regional quality issues and analyzing their causes locally. There are now 18 FQCs in Japan, the U.S., Europe, China, Mexico, Brazil, South Africa, India, Australia, Thailand, Malaysia, and other locations.

Our FQCs conduct market quality research and analysis in five phases. First, they recall problem products from the market to clarify the facts and conduct detailed interviews to replicate the defects (Phase 1). Next, they bring suppliers together with our R&D and manufacturing divisions to share information, decide on areas for further investigation, and assign responsibilities (Phase 2). Based on the findings of these detailed studies, staff members gather again to scientifically pinpoint the cause of the problem and decide on specific countermeasures (Phase 3). These measures are incorporated in future R&D and manufacturing activities and new management structures are put in place to prevent recurrence of reliability issues or incidents (Phases 4 and 5).

Conceptual representation of the five phases of market quality research and analysis

Improving Initial Quality

We are strengthening our efforts to deliver high-quality new vehicles to our customers.

The Chief Vehicle Engineer (CVE), who is responsible for development, meets with the CQE to share information from the market in order to promptly respond to customers' wishes and potential satisfaction concerns. We confirm quality improvements for each process and explore necessary risk-reduction measures by visualizing potential risks at the planning stage. Applying all of these processes with transparent criteria lets us ensure that new models offer high quality from the outset.

Enhancing Durability

So that our customers are able to continue enjoy driving in our vehicles for many years, we are promoting efforts to address the deterioration caused over time by long-term vehicle use, such as the discoloration or deformation of resin, abrading of the surface materials, stripping away of chrome plating, and abnormal noises due to material fatigue. We consistently obtain data of warranty after the initial sale and conduct quality checks on recovered vehicles and parts actually used by customers to identify defects earlier. Analyzing this data helps us develop technologies that are more resistant to durability issues.

Fair and Prompt Response to Material Quality Issues

As an automobile manufacturer, Nissan's primary responsibility is to do its best to prevent product defects from occurring. At the same time, it is our responsibility to be prepared for worst-case scenarios in the manufacture of automobiles, which are extremely complex industrial products. Nissan's basic stance on recalls is to respond in a transparent, fair, and prompt manner. It is our policy that decisions on recalls should be made from the perspective of compliance with laws and regulations, as well as from the perspective of how the issue affects customer safety. Specifically, Nissan makes decisions on recalls with the highest priority on ensuring customer safety, minimizing customer inconvenience, and complying with laws and regulations. When the recall decision is made, Nissan encourages customers to receive prompt repair information and visit repair facilities.

If a problem is found in a vehicle manufactured or sold by Nissan, a recall decision is made in accordance with internal regulations together with representatives from the region closest to the customer.

After a recall decision is made, the following measures will be implemented to enable prompt repairs with top priority given to customer safety and security.

- Notification will be sent in a prompt and fair manner by postal mail to customers who own vehicles covered by the recall. Dealers will also contact customers, if necessary.
- Recall notifications will be posted on the website and on the mass media to inform the customer.
- We also make the required reports, including notifications to the authorities in accordance with the laws and regulations of each country.

Recalls in FY2021*1

Country / Region	Number of Recalls	Recalled Vehicles (1,000 units)
Japan	11	504
North America	25	3,149
Europe	9	56
Other	20	381
Global	47*2	4,090

*1 Since they are sourced from internal data, these figures may differ from data published by government authorities.

*2 The total number of recalls is calculated by counting each recall measure as one case; therefore, the aggregate number of recalls by country / region does not sum to the global total.

Approaches with Suppliers

As our production network expands worldwide, the risk of problems related to the quality and supply of parts increases. Our efforts to ensure product quality include working with suppliers to improve quality at all production sites from the design stage onward.

Promoting Risk Evaluation and Reduction Management Among Suppliers

We promote stronger global management at the head offices of our suppliers with global operations even as we work to enhance our own global quality management. Nissan representatives visit each supplier's plants and check the quality control conditions on their production lines. We also

Contents		Corporate direction		Environmental		Social		Governance		Data / Index	
Social Policies and Philosophy	Human Rights	Traffic Safety	Diversity and Inclusion	Product Safety and Quality	Supply Chain Management	Human Resource Development	Labor Practices	Employees' Health and Safety	Community Engagement		

offer support for suppliers' efforts to meet the quality control standards we require.

In addition to these activities, we have prepared checklists based on successful resolution of past issues and work not only with direct suppliers but also with tier-2 suppliers to implement quality improvement measures.

Supplier Inspections and Training for Improving Product Safety and Quality

To ensure product safety, we work together with suppliers and conduct inspections for products as well as components.

Each component from our suppliers represents the end-product of a complex manufacturing process that includes planning and development validation, turning design blueprints into prototypes, performance testing, and, finally, mass production. We have created a system called Alliance New Product Quality Procedure (ANPQP)* for regulating the necessary quality assurance across this entire series of activities. The ANPQP requires tests to be carried out on every component delivered by suppliers to confirm their high quality.

To determine whether new suppliers are able to carry out these tests, we developed the Alliance Supplier Evaluation Standard (ASES)* system.

The ASES contains 240 evaluation criteria to determine if a component is defective and analyze the systems in place to prevent problems occurring. The ASES is applied on-site, at the supplier's factory. New suppliers undergo ANPQP training and are certified as trainers themselves after they reach a specified level. They then conduct training on the supplier's premises and build a system for supplying precision-built components.

For all Nissan suppliers, we are implementing a "Supplier Score Card" containing an assessment of diagnostic measurements such as delivered quality and market quality as well as the Supplier Health Check (SHC)*

supplier audit to check their management system. This ensures that suppliers maintain their systems for consistently delivering high-quality components and conduct new initiatives to further improve quality. We are implementing initiatives to ensure quality in response to changes in the environment, such as remote checks from fiscal 2020.

* Click here for more information on ANPQP, ASES, and SHC

Sales and Service Quality Improvement

Nissan continues to improve not only vehicle quality but also quality of service at Nissan dealerships seeking to exceed customer expectations at all touch points. Through effective management of sales and service quality at dealerships in major markets around the world, we strive to improve Customer Satisfaction (CS) by adhering to the Nissan Sales and Service Way (NSSW).

Nissan Sales and Service Way (NSSW)

NSSW is a set of global guidelines designed to improve sales & service quality. It aims to increase satisfaction with our sales and aftersales service in targeting to achieve top-level CS in key markets including Japan, the U.S., China, and major European markets and we conduct a range of activities based on the NSSW. In particular, we set global standards in hardware and software aspects to provide customers with a consistent sales and service experience.

Social Policies and Philosophy	Human Rights	Traffic Safety	Diversity and Inclusion	Product Safety and Quality	Supply Chain Management	Human Resource Development	Labor Practices	Employees' Health and Safety	Community Engagement		

Updating Global Dealership Standards

In response to the diversification of our customers' expectations and lifestyles, we introduced the Nissan Retail Concept (NRC) to dealerships around the world to promote standardization for providing consistent brand experience. The new dealership layout and design is intended to appeal to all customers, from those who come to purchase a new car to those who come for vehicle inspection or servicing, creating comfortable, welcoming spaces that offer needed services as efficiently as possible.

NRC also incorporates key Nissan brand elements such as Nissan Intelligent Mobility*, Electrified vehicles, the NISMO performance sub-brand, light commercial vehicles, and Nissan Intelligent Choice (our premium certified pre-owned car program). Adoption of the new standards has already begun in key markets, and more than 2,900 stores had completed the facility standard adoption by the end of fiscal 2021. We continue to deploy the new concept in our stores around the world.

* Click here for more information on Nissan Intelligent Mobility.

Shift to a More Customer-Centric Company

The number of customers who expect a seamless, pleasant online sales and service experience is increasing, but each customer has different needs. We aim to respond to individual needs and provide a customer experience that goes beyond expectations. To ensure the implementation of these initiatives, Nissan Academy, a special team for educating dealers, develops and conducts training for dealership staff and management to go beyond customer expectations. To boost our activities at dealerships, we train area managers and continuously improve our practices. These area managers analyze dealer operations, develop improvement plans based on their individual situations, and support their implementation, to let dealers continue autonomous improvements.

Focusing on the voice of each individual customer and quick problem resolution, we also implemented Quick Voice of Customer (Quick VOC). It is not a survey but rather a powerful tool to capture customer's feedback with three simple questions and free comment. In case a customer shows any concern, Quick VOC provides the Dealer / Nissan a hot alert and allows the Dealer to quickly resolve the specific customer's concern and thereby increases customer promotion for Nissan.

We continue to improve the quality of our sales and service in order to improve satisfaction among customers who visit our dealerships.

New logo Nissan dealer outlet
